## Dear Parents, Teachers and Students of St. Anthony

STEM is an approach to learning and development that integrates the areas of science, technology, engineering and mathematics. The global economy is changing. Current jobs are disappearing due to automation and new jobs are emerging every day as a result of technological advances.

The continual advances in technology are changing the way students learn, connect and interact every day. Skills developed by students through STEM provide them with the foundation to succeed at school and beyond.

### Why it's important to encourage STEM Education in Early Age for Children?

1. By learning STEM education, children become more independent and cooperative
2. STEM education and activities are helpful for children to develop the basic skills into advance skills.
3. Preparing today's children to become the innovators and inventors of tomorrow begins with STEM education.
4. It is the need of the time and the earlier children are introduced to it the better it is for them to become the leaders of tomorrow.
5. STEM education provides children with experimental learning. They will learn real-life experience by solving real-world problem through hands-on activities

I would like to express my gratitude to the St. Anthony's Alumni Association for the launching of these STEM educations to the 3 schools and I hope all parents and students will take this golden opportunity to enrol in this program.

STEM empowers individual with skills and adapt to this changing world.

Regards and Happy Learning
