

I am very happy indeed and grateful to the St Anthony's School Alumni (Persatuan Alumni St Anthony Teluk Intan - Kuala Lumpur) who has taken the initiative to support my school with the Online **STEM EDUCATION** Career platform for all my students. This is really fabulous and wonderful.

The Science, Technology, Engineering and Mathematics (STEM) programmes are comprehensive interdisciplinary studies that students of all ages can learn. STEM fields are significant forces of innovation and development, resulting in modern technology and advances that improve our daily lives. It motivates and inspires young people to generate new technologies and ideas. With a focus on practice and innovation, my students will get to learn from inquiry-based tasks at school. STEM Education will give my students a better understanding of concepts and encourages knowledge application.

I hope with this introduction of the online STEM EDUCATION Career platform by the Alumni, my students will be further encourage to explore with curiosity, as well as learn more about the world around them in a fun, hands-on manner and improving their critical skills to succeed in life.

Thank you Persatuan Alumni St Anthony's School Teluk Intan-Kuala Lumpur.
